Francis McGuigan Director of Cloud Infra & Service Delivery, Aer Lingus

“The Aer Lingus partnership with Amach has helped drive an AWS design and implementation that provides Aer Lingus with a strong model for AWS governance to support the migration of our workloads.

The Aer Lingus and Amach partnership has resulted in a single team effort in implementing an AWS design that supports our numerous business areas.”

Challenges with Legacy Systems

Legacy on premise systems pose significant challenges that impact productivity, costs, and the passenger experience. Common issues include:

Legacy Systems: Inefficiencies in time, cost, and scope

Decision Making: Data silos create inaccurate information across departments, such as booking and baggage handling.

Integrations: Difficulty integrating outdated platforms with new technology.

Talent Acquisition: Difficulty in finding highly skilled resources for temporary engagements.

Maintenance Cost: High maintenance expenses for legacy systems.

Cybersecurity Threats: Increased risk of cyber-attacks due to integrated systems.

Automation: Lack of automation, leading to failures in production reliability and passenger dissatisfaction.

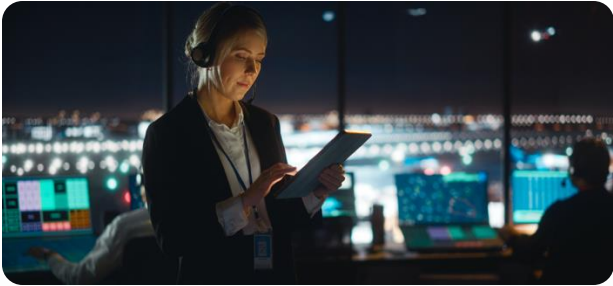

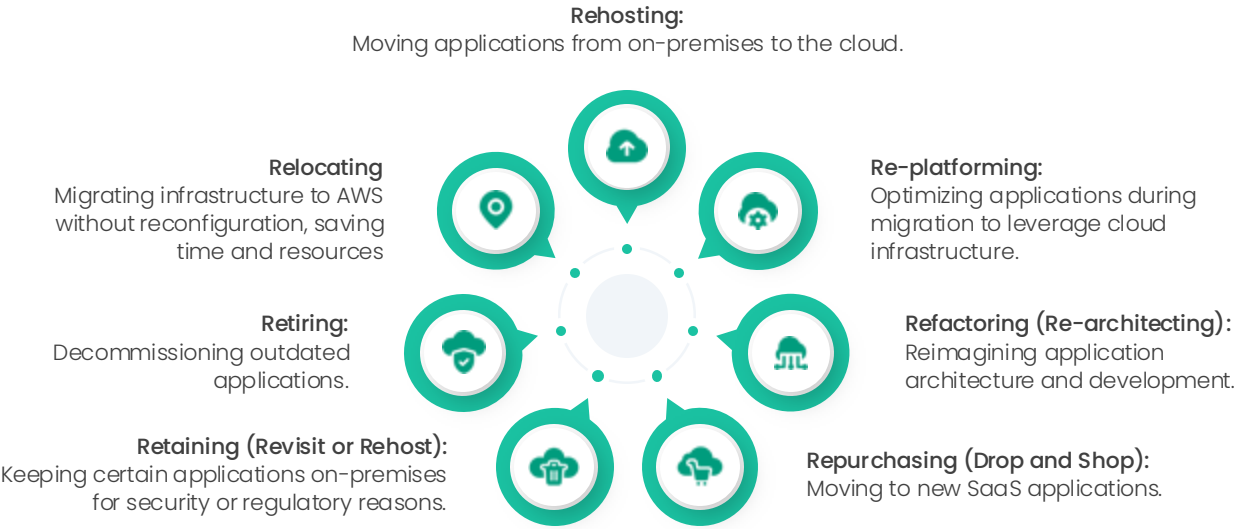

Workplace Modernization: Incompatibility of legacy systems with modern work tools.

Amach's 7R Framework

For Cloud Migration

The Amach 7R Framework provides a structured approach for migrating legacy applications to the cloud, ensuring the best fit based on cost, complexity, and performance. The 7Rs include:

Amach's Cloud Solutions for

Digital Transformation

Amach enables organizations to overcome the complexities of moving legacy on premise systems towards a streamlined, efficient cloud infrastructure. Our solution offer:

- 

Seamless Transition to Cloud:
Smooth migration from on-premises to cloud.
- 

Data-Driven Decision Making:
Elimination of silos for accurate, cross-departmental insights.
- 

Enhanced Automation:
Integration of automated processes to improve reliability.
- 

Robust Security Measures:
Protect data integrity and operational resilience against cyber threats.
- 

Support for Modern Work Environments: Compatibility with new work tools and technology.
